

# DE LISLE TRANSFORMER ISOLATED AB/Y AMP SWITCH

Thank you for purchasing the de Lisle Transformer Isolated AB/Y Amp Switch, an effective solution for ground loop hum in multiple amp scenarios.

This switch is designed for instrument level signals. Do NOT hook up speaker outputs to this device. This switch connects to the input of the amplifier(s).

Use only 9VDC regulated adapters with center negative, sleeve positive.

## FEATURES AND FUNCTIONS

- 1) INPUT connects to your guitar or pedal board output
- 2) PHASE SWITCH reverses the phase of OUTPUT B. When using two amps, set the switch to the position that results in the fullest sound.
- 3) OUTPUT B connects to a second amplifier.
- 4) OUTPUT A connects to the main amplifier.
- 5) A/B toggles between OUTPUTS A and B. When both outputs are engaged, the LED indicator will show the selected output that will be active when Y is disengaged.
- 6) Y engages both OUTPUT A and OUTPUT B .
- 7) DC JACK connects to a 2.1MM/5.5MM 9VC power supply.
